HOW FOREXTRADE1'S CALENDER BASED SIGNAL WORKS?

www.forextrade1.co

WHAT IS CALENDER BASED SIGNAL?

A calendar-based signal in trading refers to a trading signal generated based on specific time-based events, economic calendar releases, or recurring market patterns rather than technical indicators or price movements alone. These signals are often linked to scheduled economic events, earnings reports, central bank meetings, holidays, or seasonal trends that influence market behavior.

OUR SERVICES

FOCAL -800

- $100-$150 daily profit
- 1 entry per trade
- Min. investment $200-$1000

PREMIUM -2500

- $200-$300 daily profit
- 2-3 entries per trade
- Min. investment $1000-$5000

GOLD -5000

- $500-$1000 daily profit
- 4-6 entries per trade
- Min. investment $10000-above
- Pending order Premium tool
- Calendar signals copy trade

PLATINUM -7000

- $3000-$10000 daily profit
- Multiple entries per trade
- Min. investment $30000-$50000
- Pending order Premium tool
- Calendar signals copy trade

BENEFITS OF USING OUR CALENDAR SIGNAL SERVICE

1. High accuracy
2. Precise entry and exit points
3. Risk management
4. Consistency
5. Time-saving
6. Comprehensive Support for Your Trading Success
    - 24/5 Live Chat Support:
    - Weekly Voice Calls
    - Weekly Video Conference:

HOW FOREXTRADE1'S CALENDAR SIGNALS WORKS?

ForexTrade1's Calendar Signals are designed to help traders capitalize on market movements triggered by scheduled economic events. These signals are based on daily news, events, and market trends, boasting an accuracy rate exceeding 95%.

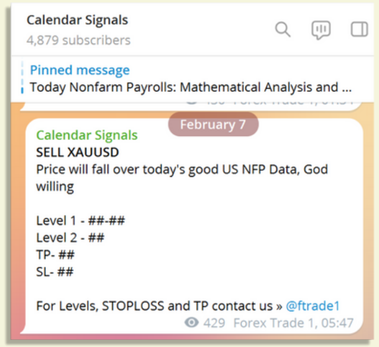
XAU/USD Signal During February 2025 NFP Release

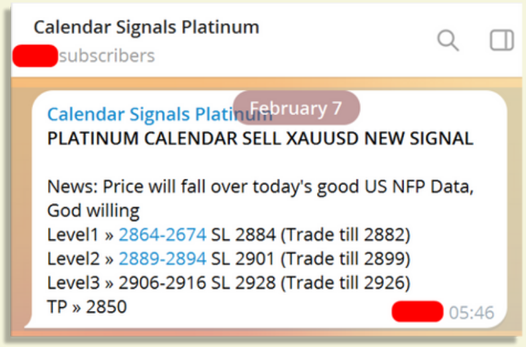
On February 7, 2025, the U.S. Bureau of Labor Statistics released the Non-Farm Payrolls (NFP) report, which is a critical indicator of economic health. ForexTrade1 anticipated that the NFP data would significantly impact the XAU/USD (gold vs. U.S. dollar) pair.

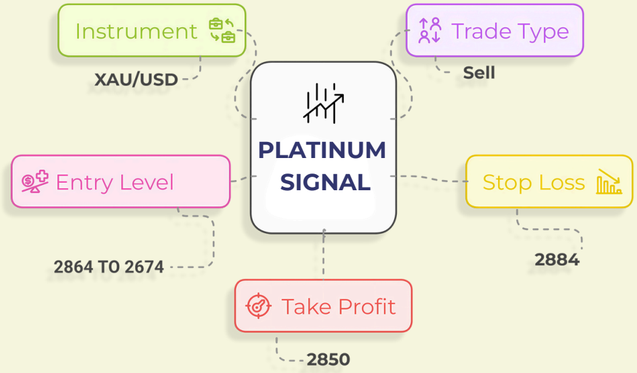
SIGNAL TO TRADE :

INITIAL FREE SIGNAL



INITIAL PLATINUM SIGNAL





SIGNAL RESULT :

Reason : A strong NFP report was expected to boost the USD, weakening gold as a safe-haven asset.

Data Outcome: With 143,000 jobs added, the USD strengthened, causing gold prices to decline toward the take profit level.

STRATEGY 1: FIX LOT SIZE STRATEGY

For example :

SELL XAUUSD

Entry 1 : 2380 - 2390 | SL - 2400 (trade till 2398)

- Lot Size per Trade: 0.1 lot
- Total Trades: 19 entries ($10 per entry)
- calculation on capital 100k | Risk = $2000 (2% Risk)

Entry Price	Lot Size per Trade
2380	0.1 lot
2381	0.1 lot
2382	0.1 lot
2383	0.1 lot
2384	0.1 lot
2385	0.1 lot
2386	0.1 lot
2387	0.1 lot
2388	0.1 lot
2389 (Breakeven point)	0.1 lot
2390	0.1 lot
2391	0.1 lot
2392	0.1 lot
2393	0.1 lot
2394	0.1 lot
2395	0.1 lot
2396	0.1 lot
2397	0.1 lot
2398	0.1 lot
	1.9 LOT

BREAKEVEN CALCULATION :

Entry + Trade till point / 2 = Breakeven point
2380 + 2398 / 2 = 2389

Breakeven - SL = Total loss point
2389 - 2400 = 11 points

PROFIT CALCULATION :

Profit = 1.9 Lots x 11 points = $2090

STRATEGY 2: INCREASING LOT SIZE STRATEGY

SL CALCULATION :

= Average points - SL point
= 2396 - 2400 = 4 Points ($4000 risk)

PROFIT CALCULATION :

= Average points - Entry point
= 2396 - 2380 = 16 Points ($16000 Profit)

For example :

SELL XAUUSD

Entry 1 : 2380 - 2390 | SL - 2400 (trade till 2398)

- Trading starts with 0.01 lot, & keep double then previous traded lot
- Total Trades: 10 entries
- calculation on capital 100k | Risk = $4000

Entry Price	Lot Size per Trade	Calculation to find out breakeven point
2380	0.01 lot	2380 x 0.01 lot = 23.8
2382	0.02 lot	0.82 x 0.02 lot = 47.64
2384	0.04 lot	2684 x 0.04 lot = 95.36
2386	0.08 lot	2386 x 0.8 lot = 190.88
2388	0.16 lot	2388 x 0.16 lot = 382.08
2390	0.32 lot	2390 x 0.32 lot = 764.8
2392	0.64 lot	2392 x 0.64 lot = 153088
2394	1.28 lot	2394 x 1.28 lot = 3064.32
2396 (Breakeven point)	2.56 lot	2396 x 2.56 lot = 6133.76
2398	5.12 lot	2398 x 5.12 lot = 12277.76
	10.23 LOTS	**24511.28**

BREAKEVEN CALCULATION :

= 24511.28 / 10.23 lots = 2396

STRATEGY 2 TRADING TOOL
